This pico-repeater is intended for use in 1800 MHz indoor GSM systems. It is a very compact and lightweight unit and it is especially advantageous to use it inside the buildings, rooms, tunnels where the field strength is weak. It is a cost effective solution to cover areas, which cannot be covered economically with base stations. It can be installed easily. Status information such as overload, over-temperature, supply voltage failure, PLL unlock is indicated by red and green LED-s.
